

Package Tracking System

When you want to track a package, Depend on us...

Features:

- Scan existing UPS or FedEx barcodes or your own barcode labels. Allows multiple Package Scans and Search Criteria
- Type the accepting persons Last Name
- First Name field optional, but recommended in Signature Field
- Enter PO Number and Comments if desired
- Clicking Save will capture the accepting person's name and signature and link it to the package ID's that were scanned
- Reviewing the information (with the "previous" and "next" buttons) lets you see the records that have been entered
- You can also start a new record from this page by clicking the "Save" button
- If there are multiple packages scanned you can scroll through the list using the scroll bars

A screenshot of a dialog box titled "Enter Parameter Value". It has a question mark icon and a close button (X) in the top right corner. The main area contains a text input field labeled "DeptCode". Below the input field are two buttons: "OK" and "Cancel".

Choose the Department, then scan all the packages that were delivered.

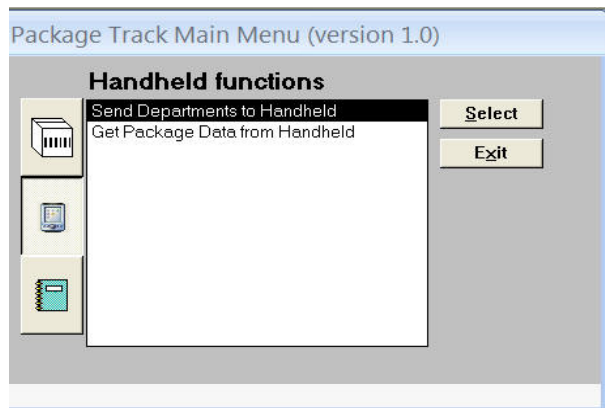

Package Tracking is a product that can assist in making sure the packages that are shipped across the country make it across the campus – across the warehouse – or across the hall ... and confirm that the package is delivered to its final destination. Package Tracking is a friend to the receiving, warehouse, or distribution manager who has his day as well as his hands full, making sure that **"INTERNAL CUSTOMERS ARE RECEIVING"** their packages on a secure and timely basis ... after they're received at the receiving dock or in the mail room. Also tracks internal warehouse shipments and textbooks, print shop materials, etc... The question "where is my package" can now be answered with ... "John signed for it at 10:45 in his office" ...

A screenshot of a web application window titled "MasterDataForm". The main content area is titled "Package Data". It contains several input fields: "Date/Time Stamp" (6/14/2010 8:01:49 PM), "Department" (Information Systems), "Scanned Packages" (a table with four rows, each containing the number 087797), "Purchase Order" (050377M), "Last Name" (Richards), "First Name" (Bob), and a "Comments" field. There is also a signature field with a handwritten signature. At the bottom, there are buttons for "Import Handheld Data", "Filter by Last Name", "Filter by Package", "Filter by PO Number", "Turn Filter Off", and a "STOP" button. The status bar at the bottom shows "Record: 9 of 14" and "No Filter".

Transfer your data from the handheld back to your PC in seconds. Then view what packages were sent where, and who signed for them.

Package Tracking System

Easily send new departments to the handheld, and pull information from your handheld to your PC quickly.

Print custom reports, ranging from specific dates, specific PO's, specific departments, or the last name of the receiver who signed for the package.

System Requirements

- Windows NT SP6, 2000, XP Pro, XP Home
- 133 MHz or Higher Pentium-compatible Processor
- 64 MB Ram, 650 MB Free Hard Disk Space
- CD Rom Drive, Keyboard
- VGA or higher resolution monitor

Know Where your Packages Are

- When they were received
- Who signed for them
- What department they are in

Simple to Operate:

Select the Department

Scan the Barcodes

Enter Name, Signature, PO, Comments
