## ABOUT DYNASCAN

**MANUFACTURING SUPERIOR  
PROFESSIONAL DISPLAYS SINCE 1998**

DynaScan is a leading brand of professional LCD and LED displays. World-renowned for our high brightness displays, we continuously expand our portfolio with new products, solutions, and features. With offices in Asia, Europe and North America, we are uniquely equipped for international rollouts and client support.

**Chroma**

## PRODUCT CATEGORY

# INDOOR

With installations around the world, DynaScan displays are a proven solution for high ambient light applications. With brightness ratings as high as 6000 nits, DynaScan ultra-high brightness LCDs shine bright in direct sunlight—making them an ideal solution for window-facing applications, semi-outdoor, and brightly lit indoor environments.

## ULTRA-HIGH BRIGHTNESS DISPLAYS

As the first to produce a professional LCD specifically designed for use in direct sunlight, DynaScan continues to be the proven solution for high ambient light environments.

With brightness ratings as high as 6000 nits, DynaScan ultra-high brightness LCDs are among the brightest in the world, allowing them to shine bright in direct sunlight and are ideal for enclosures, kiosks, and window-facing applications.

Brightness doesn't come at a sacrifice of color quality. Every screen is TrueColor™ calibrated to ensure superb color quality and uniformity.

Not only are DynaScan UHB displays the brightest in the world, but with the lowest watt per nit ratings in the industry, they are also among the most power-efficient. DynaScan offers the widest variety of sizes models ranging from 32" to 86", and in brightness levels ranging from 2500 to 6000 nits.

**DynaScan**

## INDUSTRY TREND

Retailers are fighting to stand out from other stores with rapidly adapting and engaging messages that can only be accomplished in a digital medium. Within the time it takes to design, print, ship, and install a printed poster, the messaging needs could have easily changed.

High brightness displays are a necessity for window-facing digital signage; displays are competing against the reflection on the glass and the brightness of direct sunlight. Not only does DynaScan manufacture displays to overcome these challenges, but we've also designed them to accurately reproduce brand colors, skin tones, and colorways.

KEY FEATURE

# A WIDE VARIETY OF SIZES AND STYLES

One size does not fit all applications. DynaScan is the only manufacturer in the industry to offer a full range of high brightness LCDs ranging from 32" to 86" in standard and narrow bezel styles.

KEY FEATURE

# THE BRIGHTEST IN THE WORLD

DynaScan ultra-high brightness LCDs with maximum brightness ratings up to 6000 nits, which can easily be viewed in direct sunlight, such as storefront windows or outdoor enclosures without interference of glare from surrounding glass and reflections.

### TRUECOLOR™ CALIBRATED

Every screen is factory calibrated to D65 (6500K) CIE color standard. This color setting produces a natural looking image which has a correlated color temperature to that of daylight.

### BRIGHTNESS & COLOR GUARANTEED

All DynaScan high brightness LCDs are guaranteed to produce a bright, vivid image with a brightness and color degradation of no more than 9% over 5 year of continuous use.

### INTELLIGENT THERMAL MANAGEMENT

Heat generated by the display is radiated away from high temperature areas while a sensor continuously monitors the internal temperature to protect the system from overheating.

KEY FEATURE

# STOREFRONT WINDOW DISPLAYS

Digital media is only effective if viewers are able to see it. DynaScan high brightness professional LCDs are a perfect solution for indoor environments that receive a high amount of ambient light such as storefront windows. To prevent blackening defect, DynaScan utilizes high-TNi LCD panels which can withstand temperatures up to 110°C (230°F).

### LOCAL DIMMING BACKLIGHT

The display features a proprietary local dimming LED back light technique for a remarkably high contrast picture. With direct local dimming, darker areas of an image receive less backlighting than lighter areas.

### BLACKENING DEFECT FREE

DynaScan offers all high brightness screens with high temperature LCD panels which can withstand temperatures up to 110°C (230°F) without blackening. This is especially crucial for direct sunlight applications.

### PROFESSIONAL USE

Designed for worry-free 24/7 operation in both portrait and landscape orientations

# SMALL

## DS323LT4

SIZE  
32"

BRIGHTNESS  
2500 nits

RESOLUTION  
1920 x 1080

The DS323LT4 is a 32-inch professional high brightness LCD. With a brightness rating of 2500 nits, this display features an LED back light for high contrast picture quality and low power consumption.

## DS371BT4

SIZE  
37"

BRIGHTNESS  
3000 nits

RESOLUTION  
1920 x 540

The DS371BT4 is a 37.5-inch high brightness stretched professional LCD. With a stretched 32:9 aspect ratio, the DS371BT4 is designed for special applications where height is limited.

## DS431LT4

SIZE  
43"

BRIGHTNESS  
2500 nits

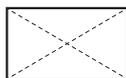

RESOLUTION  
1920 x 1080

The DS431LT4 is a 43-inch professional high brightness LCD with a 2500 nit brightness rating and 8.7 mm even bezel.

## MONITOR DIMENSION

32"

**DS323LT4**

# MEDIUM

## DS491LT5

SIZE  
49"

BRIGHTNESS  
4000 nits

RESOLUTION  
1920 x 1080

The DS491LT5 is a full HD 49-inch high brightness LCD featuring fanless cooling technology. Integrated Android™ Media Player or optional Intel® SDM slot.

## DS552LT5-1

SIZE  
55"

BRIGHTNESS  
4000 nits

RESOLUTION  
1920 x 1080

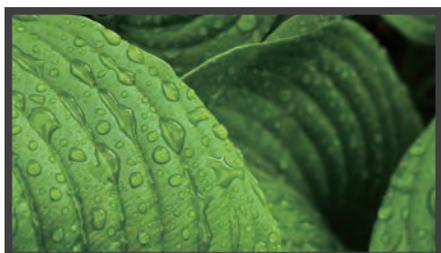

The DS552LT5-1 is a 55-inch high brightness professional LCD with fanless cooling. Integrated Android™ Media Player.

## DS552LT6-2

SIZE  
55"

BRIGHTNESS  
6000 nits

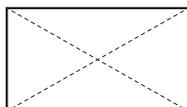

RESOLUTION  
1920 x 1080

The DS552LT6-2 is a 55-inch high brightness professional LCD with IPS technology. Integrated Android™ Media Player or optional Intel® SDM slot.

## PRODUCT CATEGORY

# INDOOR

With installations around the world, DynaScan displays are a proven solution for high ambient light applications. With brightness ratings as high as 6000 nits, DynaScan ultra-high brightness LCDs shine bright in direct sunlight—making them an ideal solution for window-facing applications, semi-outdoor, and brightly lit indoor environments.

## WINDOW-READY DISPLAYS

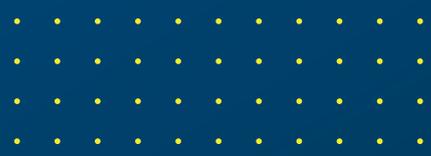

Building on the success of the DS Series, the DynaScan DW Series offers an all-in-one solution specifically designed for window-facing display applications.

The DW Series offers users a complete display solution with high-end design features such as hidden cable management, portrait and landscape orientations, and versatile mounting options such as ceiling mount and floor stand compatibility.

Features, such as dual-sided display technology, allow store owners to reach customers outside their location with an ultra-bright sunlight-readable image while offering indoor brightness on the reverse for in-store communication.

Every screen is TrueColor™ calibrated to ensure superb color quality and uniformity and features auto-brightness control sensors to automatically dim the display as lighting conditions change.

**DynaScan**

## INDUSTRY TREND

Window-facing digital signage is one of the key areas of real estate for store owners, restaurants, and service retailers to communicate with potential customers. Signage has the power to bring customers inside a store, educate customers of current promotions, and in turn increase revenue.

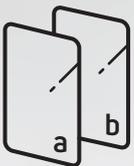

This is exceptionally helpful in industries such as fast fashion—in which styles are changing on a continuous basis—and restaurants, where daily specials and new menu additions can be visually displayed.

## KEY FEATURE

# DUAL-SIDED DESIGN

A double-sided display offers the flexibility to present different messaging points to customers inside as well as potential customers outside. A sunlight-viewable side shines bright in the window to allow visibility outdoors, while the reverse side offers reduced brightness for the indoor environment.

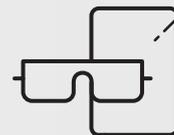

### DUAL-SIDED DESIGN

A double-sided display offers the flexibility to present different messaging points to viewers on either side.

### BLACKENING DEFECT FREE

DynaScan offers most high brightness screens with high temperature LCD panels which can withstand temperatures up to 110°C (230°F) without blackening. This is especially crucial for direct sunlight applications.

### VIEWABLE WITH POLARIZED LENSES

To ensure the image can be clearly seen throughout the day, the display utilizes quarter-wave plate technology to prevent dark images when viewing with polarized sunglasses.

## KEY FEATURE

# VERSATILE CONFIGURATION

The DW Series is designed to be as versatile as possible—offering a variety of installation configurations in either portrait or landscape orientation. Whether hanging the display from the ceiling or positioning the display on the floor, optional mounting kits offer simple and versatile installation options.

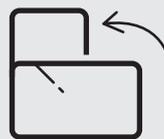

## TRUECOLOR™ CALIBRATED

Every screen is factory calibrated to the D65 (6500K) CIE color standard, producing a natural-looking image which has a correlated color temperature to that of daylight.

## AUTO BRIGHTNESS CONTROL

Different external lighting conditions require different brightness levels. An onboard light sensor measures the ambient light in the area and automatically adjusts the image accordingly.

## PORTRAIT & LANDSCAPE

The DW Series can be installed in both a landscape or portrait orientation to suit the needs of the application.

## PRODUCT CATEGORY

# OUTDOOR

DynaScan outdoor displays offer direct sunlight viewable images with year-round performance in inclement weather. DynaScan outdoor displays are IP-rated for protection from water and dust and feature IK10 vandal resistance for security and safety. The DO Series is designed as a ready-to-use solution for standalone applications while the DK Series offers a complete, robust all-in-one double-sided kiosk solution.

## OUTDOOR KIOSK SOLUTIONS

Building on our legacy as a pioneer of sunlight-viewable digital signage displays DynaScan introduces a new line of outdoor digital signage kiosks that have been designed, developed, and manufactured from the ground up for year-round performance in direct sunlight and inclement weather.

Featuring an eye-catching large-format single and dual-sided designs with ultra-high bright images up to 4000 nits, the new DK Series gives advertisers, venue owners, and municipalities the performance to clearly communicate with their audiences.

DynaScan outdoor kiosks are designed with high-performance visibility, security, and versatility in mind. From stadiums to smart cities, DynaScan outdoor kiosks are ideal for a wide variety of applications.

Features like an ultra-high brightness image up to 4000 nits provide an easy-to-see image in direct sunlight, while optional network connectivity gives operators the power to monitor, control, and troubleshoot from virtually anywhere.

## INDUSTRY TREND

Outdoor digital signage kiosks offer advertisers opportunities that were simply not previously available with static posters. With the right approach, outdoor digital signage can be an excellent facilitator between the public and city services by providing timely communication about city services, educating communities about local events and news, as well as promoting local businesses.

Digital content can not only change throughout the day or week, but it can even be custom tailored for a variety of environmental factors such as a fast food restaurant promoting ice cream offerings when the temperature exceeds a certain threshold, or a clothing retailer can show the latest outerwear designs in cold weather. Additionally, digital displays can utilize real-time data to analyze campaign performance.

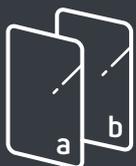

# IP-RATED WEATHER RESISTANT

Rain or shine, DynaScan outdoor displays can endure what mother nature has to offer. All-metal rustproof construction with IP56 weather protection resists water and dust from entering the display even in some of the harshest environments.

## FILTERLESS DESIGN

Filters not only reduce cooling efficiency by lowering air intake, but they can also cause a product failure if not properly maintained. DynaScan employs a proprietary thermal management system that doesn't require filters.

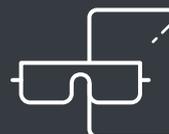

### DUAL-SIDED MODELS

A double-sided display offers the flexibility to present different messaging points to viewers on either side.

### HIGH BRIGHTNESS SUNLIGHT VIEWABLE IMAGE

With sustained brightness of 4000 nits, DynaScan outdoor kiosk are easily viewed in direct sunlight.

### VIEWABLE WITH POLARIZED LENSES

To ensure the image can be clearly seen throughout the day, the display utilizes quarter-wave plate technology to prevent dark images when viewing with polarized sunglasses.

# VANDAL RESISTANT IK10 RATED

With a tough, steel frame and double laminated glass with IK10 protection, DynaScan outdoor displays are durable and secure.

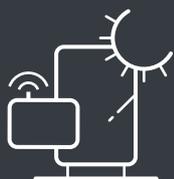

## ROBUST, READY-TO-INSTALL OUTDOOR SOLUTION

With an all-in-one design and a variety of video input options, DynaScan outdoor kiosks offer a feature-packed display solution that is ready for rapid deployment.

# 100,000

### 100,000 HRS. BACKLIGHT LIFETIME

Designed for worry-free 24/7 operation for years to come.

### REMOTE OPERATION & CONTROL \*

Onboard sensors continuously monitor conditions such as internal temperature, brightness, and power status, providing network operators with vital information about the display's performance.

### INTELLIGENT THERMAL MANAGEMENT

A hybrid thermal management system of customized dual heat sinks provides constant passive cooling without any power usage at lower temperatures.

\*Available as an optional add-on

## INDUSTRY TREND

Outdoor digital signage is no longer a luxury only found in Las Vegas and Times Square. It has increasingly become a popular option as advertisers can display multiple ads and even provide viewers with interactive kiosks to help engage their audience.

Eye-level signage requires high resolution and high bright images, while still being able to withstand inclement weather and vandalism.

From smart cities to advertising to information kiosks to wayfinding, digital signage network operators are turning to digital to give their viewers the information they expect as quickly and easily as possible.

OUTDOOR

KEY FEATURE

# IP-RATED WEATHER RESISTANT

Built to withstand the elements, DynaScan outdoor LCDs resist water and dust from entering the display.

## TRUECOLOR™ CALIBRATED

Every screen is factory calibrated to D65 (6500K) CIE color standard. This color setting produces a natural looking image which has a correlated color temperature to that of daylight.

## LOW POWER CONSUMPTION

DynaScan is the industry leader in producing the most power efficient professional LCDs. With large city-wide rollouts, high power efficiency results in lower cost of ownership, and reducing carbon footprints.

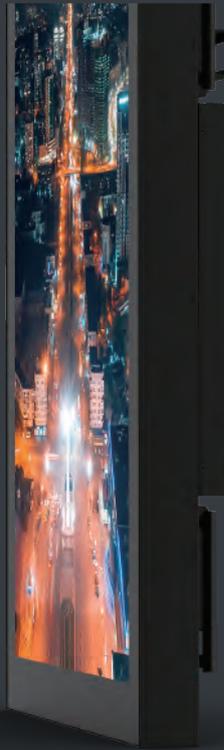

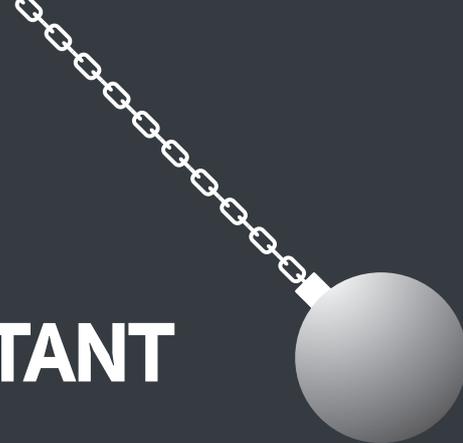

## INTELLIGENT PROPRIETARY THERMAL MANAGEMENT

Heat generated by the display is radiated away from high temperature areas while a sensor continuously monitors the internal temperature to protect the system from overheating.

KEY FEATURE

# VANDAL RESISTANT IK10 RATED

DynaScan outdoor displays are vandal resistant IK10 rated, providing one of the highest degree of mechanical protection defined by EN 50102 standard.

KEY FEATURE

# LIGHT POLLUTION CONTROL

Advanced onboard light sensors automatically adjust the image to reduce light pollution by preventing over-illumination, glare, light clutter, and harmful blue light, all without degrading image quality.

### PORTRAIT & LANDSCAPE

Users can install the DO Series in both a landscape or portrait configuration to suit environmental and usage needs.

### TOTAL CONTROL TECHNOLOGY

Onboard sensors continuously monitor conditions such as internal temperature, brightness, and power status, providing network operators vital information of the display's performance.

### SUNLIGHT VIEWABLE IMAGE

With brightness ratings  $\geq 2500$  nits, DynaScan outdoor LCDs can easily be viewed in direct sunlight applications, such as building exteriors, drive-thru menu boards, and outdoor kiosks.

# SPECIFICATIONS

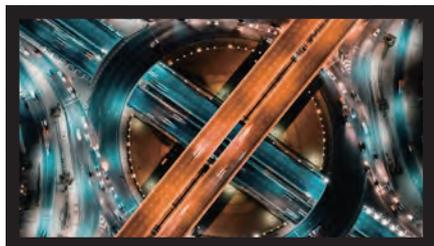

All specifications subject to change without notice.
